

Listing of claims:

1. (Previously presented) A method, comprising:  
examining start criteria;  
determining whether the start criteria have been met;  
obtaining new email events from an email database after the start criteria have been met;  
and  
forwarding information corresponding to the new email events via computer network to a database.
2. (Previously presented) A system stored on a computer-readable medium, comprising:  
a client configuration engine for determining whether start criteria have been met;  
a retrieval engine, coupled to the client configuration engine, for retrieving email events from an email database; and  
a data transmitter, coupled to the retrieval engine, for forwarding information corresponding to the new email events via computer network to a database.
3. (Previously presented) A method, comprising:  
establishing a communications channel with a client computer system;  
receiving information corresponding to new email events from the client computer system; and  
storing the information corresponding to the new email events in a database.
4. (Previously presented) A system stored on a computer-readable medium, comprising:  
a server database manager for establishing a communications channel with a client computer system, for receiving information corresponding to new email events from the client computer system, and for storing the information corresponding to the new email events in a database.

5. (Previously presented) A method, comprising:  
obtaining filter control data;  
examining email data against the filter control data;  
determining at least one transfer protocol for the email data based on the examination;  
and  
forwarding the email data according to the at least one transfer protocol via a computer network to a database.

6. (Previously presented) A system stored on a computer-readable medium, comprising:  
a filter for examining email data against filter control data, and for determining at least one transfer protocol for the email data based on the examination; and  
a data transmitter, coupled to the filter, for forwarding the email data according to the at least one transfer protocol via a computer network to a database.

7. (Previously presented) A method, comprising:  
obtaining filter control data;  
examining email data against the filter control data;  
determining based on the examination the email data that should not be forwarded;  
generating receipt data identifying the email data that should not be forwarded; and  
forwarding the receipt data via a computer network to a database.

8. (Previously presented) A system stored on a computer-readable medium, comprising:  
a filter for examining email data against filter control data, and determining based on the examination the email data that should not be forwarded;  
a receipt generator, coupled to the filter, for generating receipt data identifying the email data that should not be forwarded; and  
a data transmitter, coupled to the filter, for forwarding the receipt data via a computer network to a database.
